1. Is the Python Standard Library included with PyInputPlus?

Ans: No

2. Why is PyInputPlus commonly imported with import pyinputplus as pypi?

Ans: We can import the module with import pyinputplus as pypi so that we can enter a shorter name when calling the module's functions.

3. How do you distinguish between inputInt() and inputFloat()?

Ans: **inputInt():** Accepts an integer value. Returns an int.

inputFloat(): Accepts a floating-point numeric value. Returns a float.

4. Using PyInputPlus, how do you ensure that the user enters a whole number between 0 and 99?

Ans: By using pyip.inputint(min=0, max=99).

5. What is transferred to the keyword arguments allowRegexes and blockRegexes?

Ans: The allowRegexes and blockRegexes keyword arguments take a list of regular expression strings to determine what the PyInputPlus function will accept or reject as valid input. For example, enter the following code into the interactive shell so that inputNum() will accept Roman numerals in addition to the usual numbers.

6. If a blank input is entered three times, what does inputStr(limit=3) do?

Ans: Returns a float.

7. If blank input is entered three times, what does inputStr(limit=3, default='hello') do?

Ans: Accepts a string numeric value. Returns a float.
